Project Name	Estimate crop yield using data analytics

In this project, we have used the crop production dataset and loaded it into the IBM Cognos and made visualizations.

We have created,

- Different season with average production
- With years usage of area and production
- Top 10 states with most area
- State with crop prooduction
- Table for state name, season and crops.

Using these 5 tabs we have created a dashboard for crop yield estimation using cognos analytics.
